EDUCATION

Sri Ramachandra Institute of Higher Education and Research, Sri Ramachandra Engineering and Technology,
BTech CSE with Specialization in Cybersecurity and IOT, 2019 - 2023
Cumulative GPA: 8.48/10.00

SKILLS

Programming Languages: Python, SQL, JavaScript, C, Java

AI/ML & Data Science: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Data Analysis

Databases & Vector store: ChromaDB, SQLite

Frameworks & Libraries: TensorFlow, PyTorch, OpenCV, scikit-learn, Keras, NumPy, Pandas, Matplotlib, Seaborn, LangChain, LangGraph, OpenAI SDK

Tools & Platforms: Git, VSCode, Anaconda, Linux, Arduino, Raspberry Pi, ffmpeg, uv, Docker, OpenAISDK

PROFESSIONAL EXPERIENCE

Sri Ramachandra Institute of Higher Education and Research, Lab instructor, October 2023 – April 2024

- Led hands-on lab sessions and mentored students, simplifying complex concepts and driving skill-building through projects and practical problem-solving.

Indian Institute of Technology Madras, Pravartak Technologies Foundation, Project Associate, May 2024 – Oct 2024

- Led impactful research on vocal nodule detection, contributing to advancements in early diagnosis.
- Published work in an IEEE-indexed conference (ICIICS 2024) and received the Best Paper award.

Netcraft Solutions, AI Engineering Intern, Nov 2024 – Jun 2025

- Assisted in building AI driven tools using Python and popular libraries like Langchain.
- Supported the development of Machine Learning models and automated workflows for data processing.

Netcraft Solutions, AI Engineer, July 2025 – July 2026

- Built end-to-end RAG pipelines using LangChain, ChromaDB, and OpenAI embeddings, with GPT-4 and open-source models.
- Engineered document ingestion pipelines handling chunking strategies, embedding generation, and indexing for structured and unstructured documents.
- Developed prompt engineering and context augmentation patterns for LLM-powered Q&A applications, with iterative evaluation using retrieval and answer-quality metrics.
- Prototyped an image classification pipeline using transfer learning with automated preprocessing and evaluation, experimenting with feature engineering to improve accuracy on real-world datasets.

PROJECTS

Siamese Neural Networks for Image Similarity

- Re-implemented a Siamese Network architecture from research papers for image similarity tasks using PyTorch.
- Optimized contrastive loss for accurate representation learning.

Knowledge Distillation in Deep Neural Networks

- Reproduced and experimented with state-of-the-art knowledge distillation techniques for efficient model compression.
- Explored teacher-student training paradigms, achieving high fidelity with reduced computational costs.

Refreshable Braille Display (2nd Place, Kani Tamil Hackathon)

- Designed a low-cost assistive device for visually impaired individuals, enabling real-time text-to-braille conversion that won 2nd place at a State Level Hackathon.
